R - Saptial Map For Costco Store Locations

Week 7 & 8 Assignment - Python

Name: Kesav Adithya Venkidusamy

Course: DSC640 - Data Presentation and Visualization

Instructor: Catherine Williams

These two weeks we are going to be focused on heat maps, spatial charts, and contour charts and using various tools to create these visualizations. You must consolidate all the charts into ONE document with each chart labeled with the type of chart and technology - for example: Python - Bar Chart. Failure to label and consolidate the charts will resort in points being taken off or a 0 for the assignment.

Sample Datasets (click on the Downloads tab.)

You may also download them directly from this link: Exercise 4.2 Datasets (click the link to download a folder containing the datasets.)

You need to submit:

1 heat map, 1 spatial chart and 1 funnel or violin chart using Tableau or PowerBI

1 heat map, 1 spatial chart and 1 contour chart using Python

1 heat map, 1 spatial chart and 1 contour chart using R

1 heat map, 1 spatial chart and 1 contour chart using Python

```
In [1]:
    ## Importing Libraries required for this exercise
    import pandas as pd
    import numpy as np
    import squarify
    import matplotlib.pyplot as plt
    %matplotlib inline
    import plotly.express as px
    import seaborn as sns
    import matplotlib
    import plotly.graph_objects as go
```

Read Input datasets

```
In [2]:
## Reading the costco data
costco_df = pd.read_csv('costcos-geocoded.csv')
```

```
costco_df.head()
```

```
Out[2]:
                             Address
                                                               Zip Code
                                                                                     Longitude
